WriterDoge

Project White Paper

v2.7 · Seed terms and project information · 25 October 2026

Confirmed seed parameters: 0.000005 USDC per WDOGE; USD 25 minimum and USD 15,000 aggregate per person; 50 billion WDOGE allocation; 200,000 USDC-equivalent gross funding threshold. Scheduled campaign: 16 November–14 December 2026, 09:00 UTC. Sales remain closed.

Purpose and verified status

WriterDoge is developing a short-story community connecting writers and readers through seasonal events, transparent awards and, later, tested participation tools. The first story pilot is planned to be free to enter. A token holding does not purchase a better chance of winning.

Mint created on 21 October 2026, the verified Mainnet mint is 6EvJH7cRXsTJ4g8FvonQQhQEd6Zc87Hz7GNCu77hXrqD. Supply is 1 trillion WDOGE with six decimals. The two-signer treasury test and mint execution are completed. Core-team locks have now been funded; sales remain closed.

25 October 2026: 104 funded locks were checked on Solana Mainnet at finalized commitment. The 32 reserve proposals were executed with at least two approvals; execution evidence was saved before the Squads record deposits were reclaimed. The 72 team locks remain unchanged. This is an on-chain status check, not an independent security audit. Sales remain closed and no liquidity pool is established by these locks.

Tokenomics v2: one supply, one allocation

The minted supply is 1,000,000,000,000 WDOGE with six decimals. Verified Solana Mainnet mint: 6EvJH7cRXsTJ4g8FvonQQhQEd6Zc87Hz7GNCu77hXrqD. Allocation percentages are distinct from freely transferable balances. The team and project-reserve locks described below are funded; the remaining reserves are not time-locked.

This v2 distribution replaces the previous 93.1% initial-liquidity / 6.9% treasury model. The old 25-billion-token prize sub-reserve is not added to the new plan. Every percentage below is a share of the same total supply; there is no additional supply for team members or awards.

The three sales together reserve 18% (180 billion tokens). The 38% treasury is project property under its governance arrangements, not the members' personal allocation. Unsold-token treatment must be published before a sale; unused sale tokens are not automatically awarded to the team.

Allocation	Share of total supply	Tokens
Seed	5%	50,000,000,000
Pre-sale	8%	80,000,000,000
Launch sale	5%	50,000,000,000
Core team	10%	100,000,000,000
Advisers	2%	20,000,000,000
Treasury & ecosystem development	38%	380,000,000,000
Community, story awards, airdrops & writer support	20%	200,000,000,000
Liquidity token reserve	7%	70,000,000,000
Long-term reserve	5%	50,000,000,000
Total	100%	1,000,000,000,000

Team, advisers and personal allocations

Core team allocations total 10% and adviser allocations total 2%. The five aliases and responsibilities below preserve the project's existing public presentation. Illustrated avatars are representative; aliases are not verified legal identities. Individual awards remain subject to accepted service agreements and vesting terms.

Atlas receives 50 billion, Finn 20 billion, Rowan 30 billion, Miles 10 billion and Quinn 10 billion tokens under the plan. Quinn is the advertising adviser; this role is not an independent investor representative. Miles is a strategic adviser and is not presented as independent supervision of the treasury.

Token allocations, payment for actual work and company ownership are separate. Tokens do not by themselves provide company shares, dividends or ownership of the project treasury. A treasury signature role does not create an extra token allocation. A founder's separately purchased tokens must be recorded separately.

100 billion WDOGE (10% of supply) is funded in 72 core-team locks: Atlas 50 billion, Finn 20 billion and Rowan 30 billion. Releases are fixed for the 16th of each month, from 16 March 2028 to 16 February 2030 at 17:00 UTC (20:00 Türkiye). Cancellation and recipient changes are disabled in every lock. The planned Miles and Quinn adviser allocations are not included in these 72 locks.

Alias / responsibility	Share of total supply	Tokens
Atlas / Project lead & product vision	5%	50,000,000,000
Finn / Social media & community communications	2%	20,000,000,000
Rowan / Co-founder & business development	3%	30,000,000,000
Miles / Strategic adviser	1%	10,000,000,000
Quinn / Advertising adviser	1%	10,000,000,000
Total	12%	120,000,000,000

Locks and vesting: plan versus implementation

100 billion WDOGE (10% of supply) is funded in 72 core-team locks: Atlas 50 billion, Finn 20 billion and Rowan 30 billion. Releases are fixed for the 16th of each month, from 16 March 2028 to 16 February 2030 at 17:00 UTC (20:00 Türkiye). Cancellation and recipient changes are disabled in every lock.

The deployed core-team locks use fixed on-chain dates. A future TGE announcement cannot move these dates. This fixed team schedule is separate from the proposed purchaser vesting schedules.

The TGE reference date is set to 16 February 2027 at 17:00 UTC (20:00 Türkiye). 16 November 2026 remains the seed opening target only. This is a future schedule, not an executed TGE or an open sale. Purchaser dates and contractual terms must be published and accepted before payments are collected.

For proposed purchaser vesting, periods are calendar months measured from the announced 16 February 2027 TGE reference. Exact dates and times will be published before accepting funds. Instalments use integer base units at six decimals and differences between cumulative rounded-down entitlements to release the purchased amount exactly. A purchase record, a funded vesting contract and transferable tokens are different states.

Only 5 billion launch-sale tokens (0.5% of total supply) would be released at TGE if that sale sold out and its 10% initial-release proposal were adopted. Pool tokens and every other release must be added separately to determine actual circulating supply. Mint creation and TGE are separate events.

All 72 lock addresses, recipient wallets, amounts, release dates and Squads proposals: https://writerdoge.com/team-locks.html

710 billion WDOGE (71% of the 1 trillion supply) is funded in 104 locks: 100 billion in 72 core-team locks, plus 610 billion in 32 project-reserve locks. Cancellation and recipient changes are disabled in every lock. All reserve releases return to the existing 2-of-3 treasury.

Deployed reserves: treasury 360 billion WDOGE in 12 quarterly releases of 30 billion, 16 May 2027 through 16 February 2030; community 200 billion in 16 quarterly releases of 12.5 billion, 16 May 2027 through 16 February 2031; long-term reserve 50 billion in four quarterly releases of 12.5 billion, 16 May 2030 through 16 February 2031. Every release is on the 16th at 17:00 UTC (20:00 Türkiye). The 20 billion operating reserve remains outside these locks under 2-of-3 custody; it is not an authorization to spend.

Addresses, amounts, dates and evidence for all 32 reserve locks: https://writerdoge.com/reserve-locks.html

Release schedules and deployment status

Allocation	At TGE	Release schedule and deployment status
Core team	0%	DEPLOYED: 72 locks; 16 March 2028–16 February 2030, monthly on the 16th, 17:00 UTC
Advisers	0%	12-month wait; TGE months 13–30, 18 instalments; service conditions
Seed	0%	12-month wait; TGE months 13–24, 12 instalments
Pre-sale	0%	6-month wait; TGE months 7–18, 12 instalments
Launch sale	10%	Remaining 90%: TGE months 1–6, six instalments
Treasury reserve	0%	DEPLOYED: 360 billion / 12 quarterly releases; 16 May 2027–16 February 2030; recipient: 2-of-3 treasury
Community reserve	0%	DEPLOYED: 200 billion / 16 quarterly releases; 16 May 2027–16 February 2031; recipient: 2-of-3 treasury
Long-term reserve	0%	DEPLOYED: 50 billion / 4 quarterly releases; 16 May 2030–16 February 2031; recipient: 2-of-3 treasury

Story awards and the community reserve

The 200 billion WDOGE community allocation is funded in 16 quarterly reserve locks for story awards, community activities, airdrops and writer support. This is not an announced season prize or a completed distribution; sub-budgets and season rules must be published separately.

Jury awards and reader-choice awards will have separate, published criteria. Before each season opens, its rules will state the prize amount and asset, number of recipients, judging and voting method, eligibility, deadlines, distribution dates, tax responsibilities and any vesting. No definite first-season token or cash prize is announced in this edition.

The intended first-season entry language is English. The published rules must cover original authorship, AI-assisted submissions, conflicts of interest, anti-manipulation measures, appeals and author permissions. Submission does not automatically transfer copyright; any publication or collectible licence requires clear terms.

Airdrops require a separately approved campaign budget and platform acceptance. No CoinMarketCap or CoinGecko partnership, reward campaign or listing approval is confirmed. Future voting deposits are separate from prize reserves and cannot be counted as reward funding. Token-lock voting and NFT awards remain planned features.

Treasury, custody and accountability

WriterDoge Treasury operates with three members and a 2-of-3 threshold. Atlas, Finn and Rowan hold proposer, voter and executor permissions. A two-signer transfer test and token-creation execution have been verified.

The verified treasury Vault address is shown below. This is a custody address, not the token mint address and not a public sale-payment instruction. Treasury custody does not itself enforce the proposed vesting schedule. This is a team-controlled treasury, not an independent audit or independent investor-protection service.

The published operating policy is that a person must not approve their own compensation or personal-benefit payment; the other two signers should review it. This is a governance policy, not an additional restriction enforced automatically by the existing 2/3 configuration. Transactions and approved expenses should be documented; monthly reporting is planned to distinguish receipts, refunds, expenses, liquidity assets, balances and token unlocks.

No spending-limit exception is shown in the checked settings and no additional time lock is configured. Changes to members, authorities or payment arrangements must be documented separately. Key loss, signer replacement and recovery procedures remain to be tested. Private keys and recovery phrases must never be collected by the project.

Verified on 25 October 2026: 710 billion WDOGE is time-locked and 290 billion remains in token accounts controlled by the 2-of-3 treasury. The unlocked custody balance comprises 20 billion operating reserve, 20 billion adviser reserve, 180 billion unsold sale reserves and 70 billion liquidity reserve. Custody is not a time lock. Purchaser, adviser and LP locks are not deployed.

Reclaiming Squads record deposits does not unlock funded escrows; record closure and token release are separate operations.

Squad Vault: DYZsdwgoMUerj97pwjNUab6tF9qYGUSFJU3TMCKgorGW

https://app.squads.so/squads/DYZsdwgoMUerj97pwjNUab6tF9qYGUSFJU3TMCKgorGW/treasury

Use of funds and compensation policy

The planning budget is based on net usable funds N: receipts actually settled after collection costs, applicable tax obligations and required refund reserves. Token notional value and a fundraising target are not treasury cash.

The proposed allocation of N is 60% operations, 20% liquidity counter-asset and 20% cash buffer. Within that same N, operations comprise 30% product/development/personnel, 12% marketing/community, 8% legal/accounting/security reviews and 10% operations/tools. These add to 60%, not to an extra budget.

Within the 30% product/personnel envelope, up to 6% of N is proposed as the total five-person service/payroll cost ceiling for the relevant funded period. Its proposed internal split is Atlas 35%, Finn 25%, Rowan 20%, Miles 10% and Quinn 10%. It includes related taxes/employer costs and is not guaranteed take-home pay. Actual scope, agreements and funded duration remain to be finalized; lawful earned compensation rights are not replaced by tokens.

The earlier net-fund scenarios of $200,000 / $1 million / $2.5 million correspond to conditional 6 / 12 / 18-month planning scopes, not verified runway or promised fundraising. Spending follows settled resources and approved commitments. Advertising budgets belong to the project and are separate from personal token shares.

The liquidity pool is planned to be funded from seed-sale proceeds after the round closes and refund obligations are resolved. The budget plan allocates 20% of net usable funds, after collection costs, applicable tax obligations and required refund reserves, to the liquidity counter-asset. This is separate from the 70 billion WDOGE token reserve. The pool amount, opening price, timing and LP ownership/lock arrangements will be published before execution. No pool is currently established and no minimum liquidity, listing or market price is guaranteed.

Seed, pre-sale and launch: preparation terms

The seed opening target is 16 November 2026 at 09:00 UTC (12:00 Türkiye); the confirmed scheduled close is 14 December 2026 at 09:00 UTC (12:00 Türkiye). These are the seed campaign dates, not the TGE. The published TGE reference is 16 February 2027 at 17:00 UTC (20:00 Türkiye). No exchange trading launch on that date is confirmed.

Sales remain CLOSED. The confirmed seed price is 0.000005 USDC per WDOGE, not a market price or USD-parity promise. Collection and wallet connections are disabled; do not send purchase funds to the treasury. Pre-sale and launch prices remain unconfirmed.

Seed reserves 50 billion WDOGE (5%). Limits are USD 25 minimum and USD 15,000 aggregate per person across seed payments and wallets. SOL, native USDC and USDT are planned on Solana Mainnet only. Eligibility, FX sources, quote validity and conversion rules remain to be published; stablecoin/USD parity is not assumed.

The minimum funding threshold is 200,000 USDC-equivalent gross accepted receipts. Full sale of the 50 billion seed allocation at 0.000005 USDC corresponds to a conditional gross capacity of 250,000 USDC equivalent; neither figure is funds raised or net usable cash. Threshold measurement and the treatment of conversions must be fixed before payment collection.

If the minimum funding threshold is not met, accepted contributions will be refunded within seven business days after the scheduled seed close, in the same asset and the same amount, to verified refund addresses. The seller will fund the refund network fees separately rather than deducting them from the accepted contribution. Exchange-origin payments require a separate refund-address verification process; participants must not assume an exchange sending address is their own receiving address. The applicable business-day calendar and handling of rejected, excess, late or incorrect-network payments must be specified before acceptance.

The project-declared responsible seller is WriterDogeHQ. Coordination contact: writerdoge@gmail.com. WriterDogeHQ is a planned future company intended to be formed after seed. These are project-provided details, not an independent verification of identity, registration or regulatory status.

Planned seed-buyer vesting is 0% at TGE, no release during the first 12 months, then 12 monthly releases in TGE months 13–24. Using the published reference, the planned dates are 16 March 2028 through 16 February 2029 at 17:00 UTC. Purchaser contracts are not deployed; the final buyer terms and delivery/claim process must be accepted before payment. The seed opening date does not start this clock.

Pre-sale reserves 8%, 80 billion WDOGE. For each actual purchase, 0% is released at TGE; there are no releases during the first six months. Twelve monthly instalments run from TGE month 7 through month 18 inclusive. The pre-sale opening date is not yet set.

Launch sale reserves 5%, 50 billion WDOGE. For each actual purchase, 10% is released at TGE and the remaining 90% in six monthly instalments, TGE months 1 through 6. The launch-sale opening date will be announced separately; the TGE reference is 16 February 2027, 17:00 UTC. A sold-out round would release 5 billion WDOGE at TGE; this is not actual circulating supply.

Payment collection and personal-data applications remain closed. Full privacy/contact information, participant eligibility, FX/quote rules, threshold accounting, safeguarded refunds and tested buyer delivery must be completed. Detailed preparation terms: https://writerdoge.com/sale-terms.html

Unsold tokens remain in their round reserve; they are not automatically awarded to the team. Any change requires a separately published decision respecting purchaser terms.

Roadmap: preparation to distribution

The seed opening target is 16 November 2026 at 09:00 UTC (12:00 Türkiye); the confirmed scheduled close is 14 December 2026 at 09:00 UTC (12:00 Türkiye). These are the seed campaign dates, not the TGE. The published TGE reference is 16 February 2027 at 17:00 UTC (20:00 Türkiye). No exchange trading launch on that date is confirmed.

Other stages advance when their published conditions are met. Sponsorship, fundraising, listings and completion are not guaranteed.

Stage	Timing / status	Work and completion conditions
1 · Foundation	Completed on 21 October 2026	Mainnet WDOGE mint and 1 trillion supply created; 2-of-3 treasury and two-signer test verified.
2 · Sale readiness & outreach	Preparation before the seed target	Mint and freeze authorities are absent; team and reserve locks are funded. Complete issuer details, pricing, sale/refund terms, payment records and purchaser vesting. Sponsor and investor outreach remains preparation.
3 · Seed	16 November–14 December 2026 · 09:00 UTC	Confirmed seed price, person limits and threshold are published. Payment acceptance remains closed until outstanding implementation and participation terms are complete.
4 · Pre-sale	After seed review; date to be announced	Publish results and remaining reserves, finalize the next round and its purchaser terms before opening.
5 · TGE, launch & liquidity	TGE reference: 16 February 2027, 17:00 UTC; market opening separate	Publish the TGE release calendar; verify locks and recipients. Finalize launch terms and any funded liquidity pool, LP ownership and controls before execution. No listing or market price is promised.
6 · Community & reporting	After the relevant preparations are ready	Publish season rules and funded prize budgets before entries open. Report treasury movements, allocations, releases and project progress monthly.

Continuity, rights and dispute handling

All 32 project-reserve locks disable cancellation and recipient changes. They cannot be retrieved early or redirected; the recipient is the existing 2-of-3 treasury.

The 72 deployed core-team locks have cancellation and recipient changes disabled. The treasury cannot retrieve them early or redirect them to a replacement wallet. Departure, lost wallet access or legal documents do not by themselves change these on-chain settings.

Accepted service agreements must distinguish earned allocations from unearned future allocations and define departure procedures. Proposed continuity protection allows previously granted but unreleased allocations to continue on their original schedule in death or permanent incapacity, where valid and technically supportable; it is not an implemented automatic inheritance feature.

In death, financial succession requires the appropriate verified legal authority. During incapacity, the entitled person remains the rights-holder and an authorized legal representative acts where required. Financial succession does not automatically transfer a treasury signer role. Technical custody and enforceable agreements must be aligned before making any guarantee.

A project lawyer and accountant are to be selected. Applicable law, notices, dispute procedures and competent forums remain to be agreed in valid contracts. A project lawyer does not automatically become an impartial judge or arbitrator. Existing legal rights and conflict-of-interest requirements remain applicable.

Limits, risks and remaining decisions

Digital assets can lose all value. Funds may be insufficient, development may be delayed or stopped, markets may not exist, and custody, contract, key-management and regulatory risks remain. A 2/3 treasury and a local technical test do not eliminate these risks or constitute a project audit.

Mint authority and freeze authority are both absent (null), verified on Mainnet. The existing supply is 1 trillion WDOGE; no new tokens can be minted through the removed mint authority. This does not promise liquidity, a market price, listing, return or project completion.

Before sale or distribution: finalize issuer details, member agreements, sale terms, prize funding, the combined release calendar, tested vesting, liquidity controls and the relevant legal/security review. There is no confirmed external audit, regulatory approval, platform partnership or exchange listing in this edition.

Version record

25 October 2026 — v2.7: published the accepted seed price, person limits, funding threshold, scheduled close and threshold-failure refund rule. Updated project-declared seller disclosures, without representing the future company as incorporated. Sales and data collection remain closed.

25 October 2026 — v2.6: clarified planned liquidity funding from seed proceeds using the 20% net-funds counter-asset budget after sale closure and resolution of refund obligations. Allocations and deployed locks are unchanged.

25 October 2026 — v2.5: added 32 quarterly reserve locks holding 610 billion WDOGE, bringing the total to 104 locks and 710 billion (71%). Disclosed 290 billion in remaining custody. Set the TGE reference to 16 February 2027, 17:00 UTC; the 72 team locks are unchanged.

25 October 2026 — v2.4: added 72 funded core-team locks, 100 billion WDOGE, their fixed release calendar and evidence links. Updated custody and mint-authority status. Other allocation percentages are unchanged.

21 October 2026 — v2.3: corrects 16 November to the seed opening target only. TGE is not yet scheduled; prior absolute release dates are withdrawn. Adds the roadmap. Sales remain closed, prices are not finalized; allocations and relative vesting periods are unchanged.

English is the sole current white paper edition; a Turkish sale-preparation summary is available separately.
